Plant Wm. P. Stark Trees This Spring! Gain 12 Months!

LIBRARY
RECEIVED
★ SEP 10 1920 ★
U. S. Department of Agriculture

Order now and your trees will go forward at once. We have a branch express office in our packing-houses, and load express and freight direct into the cars, as shown above. No delay; no rehandling. Through service, and the man in Maine gets his trees before the end of the week. An express shipment of 35 pounds goes as cheap as 100 pounds by freight, and large orders can be sent very cheaply by express. In many cases the express rate is cheaper than freight on an order of 100 trees or less—averaging only 1/4c to 1c per tree. You will get your trees in perfect condition. Our expert method of packing ensures that. Our customers call it "The William P. Stark 3,000-Mile Package," because it carries trees thousands of miles—even to such far-off countries as Australia, Siberia, Portugal, etc. We guarantee safe arrival by either freight, express or parcel post, to any shipping point in the world.

Our Trees Are Dormant

Trees are dormant all winter and they can be planted late in the spring if they are set out while they are still dormant.

The planting season is not regulated by the weather, but by the condition of the trees when you plant them. We ship thousands of trees in May to Southern planters whose season is earlier than ours. Mr. H. C. Barrett, of Virginia, says: "The J. H. Hale trees you sent me were planted the 27th of May, when the orchards in this section had peaches on them nearly as large as marbles. All are alive and looking fine, notwithstanding the greatest drought ever in this section."

Our dormant trees can be planted successfully clear up to the end of May. We are able to hold back our trees naturally in our scientifically cooled packing-houses, where the temperature is low enough to keep the buds from starting or the sap from flowing until the trees are set out in the ground. Once they are planted, they start right out and make a heavy, thrifty growth, and, on account of their big, heavy roots, often come into bearing a year sooner than trees with only average roots. No matter how far advanced conditions are in your section, you can still plant William P. Stark trees safely.

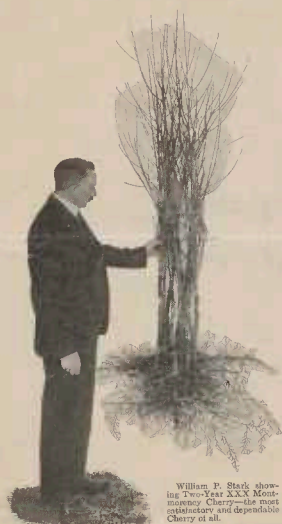

Don't lose another year on account of a late spring. Plant now and get purple clusters of grapes two years

from this spring; big red cherries in two to four years; peaches dripping with juice, crisp crimson and golden apples in four to six years—all you want to eat yourself and plenty to sell at good prices.

Gain a whole year in the growth of your orchard. There is still plenty of time and to spare. You can save time by telegraphing (night message 50 words same cost as 10). We will rush your order right through. There will be no delay. Write or wire us to-day sure.

**Stick This Slip to Your Order
if You Want Immediate Shipment!**

Your ground is ready for planting, and this gummed sticker to your order and it will be shipped the same day we receive it, and you will get your trees in a very short time, no matter where you live.

William P. Stark showing Two-Year XXX Montmorency Cherry—the most satisfactory and dependable Cherry of all.

William P. Stark Nurseries
Stark City, Missouri

It's easy to remember the address. The town is named after our Nurseries—"Stark City."

CHERRIES

*There Is a Bigger Demand than Ever for Cherries
Cash In on It! Set Out Your Orchard This Spring
You Can Still Plant Wm. P. Stark Dormant Trees*

No fruit is so popular as the Cherry for preserving and canning. Not one-tenth enough Cherries are being supplied to your home market. Did you ever hear of anyone failing to sell all the Cherries he could deliver, at fancy prices? You will find the public in your vicinity eager to take all the fruit you can grow and pay you well for it. You can also ship Cherries several hundred miles by local express and make good profits.

It is important in planting Cherry Trees to get big, heavy, healthy roots. William P. Stark Cherry Trees are noted for their strong, well-formed, vigorous root-systems—they make thrifter, faster growth and bring the trees into bearing very young.

Commercial growers make from \$200 to \$500 per acre in Cherries. James W. Markham, of Leelanau County, Michigan, harvested from a young five-acre Cherry orchard 1,539 cases of Cherries, which sold at \$1.40 a case, making a return of over \$400 per acre. But even at considerably smaller returns the Cherry is extremely profitable.

Cherry trees as fillers in an apple orchard are very profitable. They are also most desirable for planting along fence rows and drives, or as ornamental wind-breaks.

The best all-around Cherry is the Montmorency. More Montmorency Cherries have been planted than all other Cherries put together. Prof. H. E. Van Deman, former United States Pomologist, says: "The trees are quite hardy, well-shaped, and bear enormously. The fruit hangs on without rotting, even when dead ripe. Its flavor is of the most pronounced Cherry character and is retained when cooked in any way. The Montmorency is the best of all the commercial sour Cherries."

10, Sample Montmorency Cherry Trees—\$3.00

**Demonstration Bundle
of 10 William P. Stark
Largest Size XXX**

**2-Year
Montmorency
Cherry
Trees**

Best Quality, Largest XXX Size, Two-Year-Old. Collection No. 35A

We are making a special demonstration price on these largest size XXX two-year Montmorency Cherry Trees to show you the unusual quality, the strong feeder roots and abundant side roots of our Stark City grown Cherry Trees. We guarantee that you will be pleased. The demand for Cherries is growing immensely. This is your opportunity. Start your Cherry orchard now. Only one sample bundle at this special price to a customer. For larger quantities, see price-list, page 6.

Quick Delivery! Your Trees Will Reach You in a Few Hours

And in fine condition for planting. As we told you on the first page, our Trees are held naturally dormant in our scientifically cooled packing-houses and can be planted much later than ordinary trees. We guarantee satisfaction. You can still plant William P. Stark dormant Trees, and gain a year in the growth of your orchard.

Express service is fast and efficient. It has been so perfected that Uncle Sam's mail is now no faster than express. We have a branch express office in our packing-houses and your order is rushed right to the train. Here is a schedule, showing time of delivery in hours from Stark City to prominent points:

| | | | |
|----------------------------|-----------|-------------------------|-----------|
| Muskegon, Mich. | 24 hours. | Buffalo, N. Y. | 48 hours. |
| Lexington, Ky. | 24 " | Richmond, Va. | 50 " |
| Cincinnati, Ohio. | 36 " | Boston, Mass. | 60 " |
| Indianapolis, Ind. | 36 " | Hartford, Conn. | 60 " |
| Trenton, N. J. | 48 " | Portland, Me. | 60 " |
| Philadelphia, Pa. | 48 " | | |

Express rates are also much lower than formerly. A package of 35 pounds or less now goes by express as cheap or cheaper than freight. The express rate on 35 pounds or less from our packing-house:

| | |
|---------------------|--|
| To Portland, Me., | is about \$1.26 for 35 pounds, which is about the same as freight. |
| To New York City | " " 1.12 " " " " " 30c less than freight. |
| To Cleveland, Ohio, | " " .89 " " " " " 50c " " " |
| To Chicago, Ill., | " " .80 " " " " " 20c " " " |

This makes the average cost of express about $\frac{1}{2}$ to 1c per tree. Smaller trees go for less. Larger trees cost a little more. This applies to orders weighing 35 pounds or less. Also time to ship large orders by freight. Safe arrival guaranteed. In carload lots we make special prices, and it will pay co-operative associations, clubs, and large planters to write for prices on car lots to be packed in bulk. We ship everywhere.

William P. Stark showing our largest, heavy, Stark City grown roots.

Strawberry Plants

From Fresh New Propagating Beds

(We do NOT sell from old Fruiting Beds)

Strawberry Plants expend their strength in two ways—in making fruit and in making new runner-plants.

We grow our plants at Stark City for making new runner-plants only. We propagate to throw all of the vigor of the mother-plant into producing crowns and roots. They are cultivated constantly and all bloom-clusters are picked off as fast as they appear. This forces out early runners.

And these early runners get more nourishment from the mother-plant, have more time to mature and increase in size than those from old fruiting beds. They develop into stronger, more robust plants, with thick, abundant roots and heavy crowns stored full of plant food. Set out in your fruiting rows, William P. Stark plants make a faster, more vigorous growth producing heavily matted rows, berries of better quality and larger crops. They have the same vigor and dependability that have made William P. Stark trees famous among orchardists the country over.

Special Money-Saving Collections

Many fruit-growers who are not familiar with Strawberries have asked us to select varieties suited to their locality and their requirements. To meet this demand and to save you money on the purchase price, we are offering the special collections listed below. In these collections we put up named varieties of different seasons of ripening which are suited to your particular locality. (Whenever a pistillate (P) variety is sent, the proper staminate (S) variety is also included for cross-pollination.)

We select the varieties. You get the best plants of the kind best suited for your locality. We will pick out the varieties that will give you the most satisfaction in quality of fruit, productiveness, dependability, and vigor. Send your order promptly. We dig and ship direct from the field, and pack with such care that our plants carry to all parts of the country in fresh condition. Safe arrival guaranteed.

\$2.00 Home Garden Collection

No. 1A

400 Standard Plants

This is one of our most popular collections for those who want a low-priced Strawberry garden. It includes 100 plants each of the extra early, early, medium, and late varieties. It will plant a row 800 feet long, or a space of ground 37 feet by 37 feet square, with the plants set 2 feet apart in rows 4 feet apart. In the middle the rows are often set 3 feet apart instead of 4. When this is done, it will take a space 50 feet square. This collection will give you ripe strawberries over a long season. It is an unusual offer in that you get a complete assortment in a small order at prices usually given only on larger quantities.

\$15 One Acre Collection

No. 4A

5,500 Standard Plants

This collection is used by a great many market gardeners as well as people living in the suburbs, who have several vacant lots and want them to pay a good profit. Many farm-owners find it a very good investment, because one acre properly handled will often yield several hundred dollars net profits, which goes a long way toward paying expenses when there is an off year in other crops. The collection consists of 1500 early, 2000 medium and 2000 late varieties, and will plant one acre with the plants set 2 feet in rows 4 feet apart. The varieties are suited to your locality and we will send varieties that are good shipppers and keepers.

Our hardy, Oakes/Mountain grown plants are propagated in most of the greatest strawberry sections of the country. The soil and climate conditions produce large, crisp, firm and heavy fruit. The plants are robust and hardy, and because of their great vigor are adapted to every part of the country. You will be pleased with the splendid results they give.

Senator Dunlap—Large, handsome. One of the greatest of money-makers. Ripens early, long flowering season. Plant heavily of Senator Dunlap for the utmost in results.

Get Your Strawberry Garden Started this Spring

Everybody likes strawberries and everybody can grow them. Even a small patch furnishes an abundance of berries for eating fresh with sugar and cream, for short-cakes, and for the winter's supply of preserves, jams, and canned berries. They need very little care or attention, thriving even under neglect. Planted on a larger scale, they are one of the most profitable of fruits, bringing from \$100 to \$400 per acre and over.

There is plenty of time to get your Strawberry plants set out. We are equipped to make immediate shipment, and will ship either by Parcel Post or Express, both of which deliver quickly. No matter where you live, you will get your plants in a very short time. We pack the roots in sphagnum moss, which keeps them fresh and in good condition, ready for planting when you get them. Safe arrival guaranteed. Order now.

Plant for 1 Acre
of Fillers in
Apple Orchard

No. 16A--33 J. H. Hale Peach Trees, \$7

Special June-Budded Trees--Two-Foot Size

Apple Trees bear in five to seven years; Peach Trees in three to four. By planting Peach Trees between the young Apple Trees in the rows, your orchard will begin paying returns several years sooner than ordinarily, and it will pay much larger profits from the start, with very little additional cost to you.

When the young Apple Trees need the room, the Peach Trees can be cut out. You should be able to take from seven to twelve money-making crops from the Peach Trees before it is necessary to remove them. And these returns from the Peaches should pay for your Apple orchard several times over and leave you a handsome profit besides. We are offering in this collection 33 June-budded J. H. Hale Peach Trees, sufficient to plant as fillers in one acre of Apple Trees, set the ordinary

distance of 36 feet apart. The Peach Tree fillers are set in the center of the squares formed by the Apple Trees. You can buy as many of these as J. H. Hale units as you have units of Apple Trees in which you wish to inter-plant.

Both Strawberries and Peaches are splendid for inter-cropping. George T. Powell, well known to New York and Eastern fruit-growers, has taken four money-making crops of fruit from the same ground. He says:

"I have made \$340 an acre at Orchard Farm, Ghent, N. Y., from four crops of fruit on the same ground. The apple trees, planted 40 feet apart, were not in bearing. Between them peaches were interplanted 20 feet apart, currants 5 feet apart, and strawberries in between. The currants paid \$75 to \$100 an acre, peaches \$140, and strawberries \$100."

Our Special Money-Saving Spring Offers On

Genuine Delicious and Apple Trees

Original J. H. Hale and Peach Trees

Plant This Spring--Gain a Year--Take Your Profits 12 Months Earlier

If you could have known about the Delicious apple and planted it when the first scions came from old Jesse Hiatt, you might now be selling your apples at \$12 a barrel like Mr. Marlatt, of Warren County, New Jersey. If you could have set out a J. H. Hale peach orchard when Mr. Hale first planted his, you might be making \$1420 per acre as he has. For these two fruits, the Delicious in apples and the J. H. Hale in peaches, bring the highest profits of all to the fruit-growers.

When you can get 30 to 50 per cent HIGHER PRICES by planting the Delicious

Plant One-third to Half The fame of Delicious has spread wherever apples are bought and eaten. Its flavor is indescribable. Once tasted, you never forget it; you realize that the name "Delicious" is the only one that can be applied. The flesh is fine, tender, firm, overflowing with highly flavored juices. Its fragrant aroma will perfume a whole room. It is mild, but not "sweet." In color it is a bright, striped red, sometimes showing a rich yellow on the shaded side. The shape is conical, tapering, with five prominent knobs on the blossom end, by which the Delicious can always be identified. The skin is thin, but tough. It stands lots of handling, bruises dry up without decaying, and this makes it popular with fruit-dealers. It is the world's quality apple, recommended by the best fruit-dealers to their most particular customers.

The tree is hardy, vigorous, and succeeds in every apple-growing State in the Union. No other variety has such a wide range. It is a regular, dependable bearer, and usually comes into bearing from the fourth to the sixth year. Very productive, and yields good crops everywhere.

apple and J. H. Hale peach, can you afford to wait another season before setting out your trees? Isn't it good judgment and good business to plant NOW--this very spring? There is plenty of time. Our trees are dormant. You can plant William P. Stark trees successfully clear to the end of May, and they will start out and make a fast, heavy, thrifty growth. But don't wait! Make the start this spring! Order your trees now! Read our worth-while money-saving offers below!

Why the J. H. Hale Makes Money for Growers The fruit-buying public wants big peaches and yellow-fleshed peaches. Until the J. H. Hale arrived, the Elberta came the nearest to filling this demand. But in the J. H. Hale you have a peach that is not only one-third to one-half larger than the Elberta, but far surpasses it in color, shape, and quality. The meat is a rich yellow, the skin a glorious carmine. The flesh is without coarseness or stringiness, firm as a cling, yet a perfect freestone. The skin is as thin as an apricot. The firmness and solidity make it the best shipping peach known. It carries immense distances without "squashing down," and is a splendid keeper. This long-keeping quality gives the dealer plenty of time to dispose of his stock. The J. H. Hale colors up about ten days before ripening, permitting early picking. It also hangs long on the tree, extending the season at either end. As a canning peach, it is superb--holds shape, doesn't rag out; brilliant, clear syrup; retains original flavor. It is round in shape. The tree is very hardy, both in wood and bud. It is also a late bloomer. Bears young. Succeeds in every peach soil and climate. Tested in over three thousand plantings in most diversified sections for ten years.

"Genuine J. H. Hale Peach trees, budded from my bearing orchards, can be obtained ONLY from William P. Stark Nurseries, Stark City, Mo."

J. H. Hale

Note the Large Size and Round Shape of J. H. Hale Peaches Mr. Hale is Holding

All genuine J. H. Hale trees bear this trademarked tag with Mr. Hale's personal signature, of which this is an exact copy. For your protection, refuse trees without it.

\$1 Sample Bundle Delicious

Collection No. 29A 10 Special 4 to 6-Foot Size One-Year-Old Delicious Apple Trees

We are making this special offer to show you the unusual quality and exceptional root-systems of our Stark City grown trees. This sample bundle contains ten genuine Delicious apple trees, special 4 to 6-foot size one-year-old trees. One-year-old trees are largely preferred by experienced planters. Prof. F. G. Sears, Massachusetts Agricultural College, says: "The one-year-old tree costs less. Only thrifty trees are saleable at one year. Trees can be headed any desired height. They stand transplanting better." This collection is an unusual value. Ten of the famous Delicious as a demonstration at less than ordinary trees would cost. Order now.

Only one sample bundle to a customer at this special price
For larger quantities, see complete price list, page 6

\$1 Sample Bundle Offer

Collection No. 14A 10 Largest XXX Size 5 to 6-Foot Two-Year-Old Winesap Apple

Collection No. 30A 10 Largest XXX Size 5 to 6-Foot Two-Year-Old Rome Beauty Apple

These are our largest, highest quality two-year-old apple trees. We want you to see how we train them with a number of branches along the upper 14 to 16 inches. Scaffold limbs can be selected to avoid weak crotches. Main branches can be pruned to start at different heights and different directions from the trunk. This means longer-lived trees that will bear heavy loads without breaking of limbs. The Winesap is famous everywhere; grows in all apple regions; a favorite for 100 years, and ranks with the best to-day. Rome Beauty is one of the most profitable and beautiful of late winter apples; good quality and late keeper; very dependable bearer, and a good seller.

Only one sample bundle to a customer
For larger quantities, see page 6

This Vermont Man Picked Delicious Apples Four Years After Planting

Four-Year-Old Delicious Tree in Vermont That Ripened 114 Apples, Which Brought \$3.00 per Box

"The one hundred Delicious apple trees set out in 1910 have made a wonderful growth and began bearing this year (1914). One of them ripened 114 apples of high color that packed 80 to the box."

"The Delicious went fast at \$3.00 per box by my express office. These apples were picked after our Ben Davis and Spys, about the 20th of October, and picked hard at that date."

"Our Delicious have a mild and snappy flavor like syrup, which really cannot be described. They are holding up splendidly and are the firmest in my storage to-day."

Yours very truly,
C. L. WITHERSALL
(Addison County, Vermont)

Big Peach-Grower's Everywhere Planting the J. H. Hale

Hundreds of acres of J. H. Hale peaches are being set out in every peach-growing section of the country. To mention a few: Bert Johnson, Highland, Ark.; setting the pace with 10,000; Roland Morrill, Michigan; 9,000; F. M. Soper & Son, Delaware; Chert Mountain Orchard Company, West Virginia; Hopkins & Son, Michigan; John A. Wilson, of New York; M. Sheffler, Illinois; all planting from 1,500 to 3,000. The time to start a J. H. Hale peach orchard is NOW. It is the early planters who make the big profits.

Prof. Jos. Bachmann, of Arkansas, and His 16-Months-Old J. H. Hale Peach Tree Bearing Fruit

In both his immense Georgia and Connecticut orchards Mr. Hale is digging out thousands of Elbertas, giving his best land to increased plantings of the J. H. Hale peach. We are furnishing him both June-budded and largest size XX and XXX trees. Read this letter:

"SOUTH GLASTONBURY, CONN.

"Eight big boxes of superb XXX J. H. Hale peach trees opened up in perfect condition. No drying-out in your '3,000-mile package,' delivery safe and sure. Such big, stocky trees and splendid root-systems give assurance of quick, sure results. These opened up so fine I just had to take a hand in pruning them for planting. We dug the holes and fertilized last fall on the big hill, where we rooted out thousands of Elbertas to make room for these on the best orchard land we own. Thanks to the big, perfect trees, we have made a sure start for the most perfect orchard I have ever grown. The old twelve-year-old J. H. Hale orchard promises biggest crop ever this year."

"In 1914 I planted more J. H. Hale than ever before; also top-worked thirty acres of Stevens and rooted out twelve acres of Elbertas in Georgia, as land is too valuable to grow Elbertas when I can plant J. H. Hale, which has brought me 75c to \$1.25 MORE per crate than Elbertas from the same orchard."

"Yours very truly,

J. H. HALE."

"No More Elbertas" Says Mr. Hale

Hardier than Elberta in Mr. Hale's Orchards

In Mr. Hale's Connecticut orchards the J. H. Hale has gone through 27 degrees below zero, which killed Elberta, Belle, Carman, Fox, and other extra hardy varieties in the same orchard. It has again proved itself hardy in bud in the recent Georgia cold snap. Read Mr. Hale's account, written from Fort Valley, Georgia:

"Arrived last Friday. As to the freeze, it was very dry at the time. Elberta, J. H. Hale, Belle, and Hiley were in full bloom. Temperature went as low as 22 in spots and averaged about 26 here in the heart of the Georgia peach belt; heavy snow formed on all open still water. Of the varieties in full bloom at the time of the freeze, J. H. Hale, which was two or three days later blooming than Elberta, lost 40 to 50 per cent of bloom, Elberta 60 to 75 per cent, Belle 70 to 80 per cent, and Hiley about 90 per cent."

"Tell the boys that the old J. H. Hale trees that were so full of peaches last year were overlanded with bloom and now have enough little green peaches on the trees for fine full crops, and, unless there is a great drop later on, we shall be obliged to do a heap of thinning bye and bye."

Special Demonstration Offer of J. H. Hale Peach Trees \$2 Sample Bundle

Collection No. 15A

Ten 2-Foot June-Budded J. H. Hale Peach Trees

As a demonstration to commercial planters, we will furnish a sample bundle of ten 2-foot June-budded J. H. Hale trees at the special price of \$2.00. June-budded peach trees have a one-year-old top and a one-year-old root. The so-called "year-old" peach tree has a one-year-old top and a two-year-old root. Naturally, June-budded trees are shorter. However, the roots are strong and well-branched, the trunks are stocky and straight, the tops low-headed and well-branched. They have all the potential vigor and possibilities of the older trees. This is an exceptional opportunity to try this wonderful peach at very little expense.

Only one sample bundle to a customer. For larger quantities, see page 6.

J. H. Hale Peach Trees

June-budded peach trees have a one-year-old top and a one-year-old root. What are known as "one-year" old peach trees have a one-year-old top and a two-year-old root. June-budded trees are shorter and have low heads. The trunks are stocky and straight; the roots are strong and heavy.

June-budded peach trees are preferred by commercial orchardists. Bert Johnson, the biggest peach grower in the West, planted 10,000 J. H. Hale June-budded trees last spring. Mr. Hale has planted over 125,000 June-budded peach trees, and says he will have no other tree. Mr. John Baird of Ft. Valley, Ga., reports that out of June-budded trees and one-year-old peach trees planted at the same time, the June-budded trees bore the first crop. Special prices on 2 ft. June-budded J. H. Hale peach trees.

Stark City Grown Two-Year Apple Trees

Our two-year-old apple trees are pruned in the nursery with the same individual care they would be given in the orchard. They are gone over many times during the season—given better treatment, in fact, than in best orchards. This shaping and pruning forms well balanced trees, suitable for either low or medium headed trees, as you prefer. William P. Stark trees are given the right start. They are preferred by experienced planters to the ordinary untrained two-year trees because they come into bearing sooner, produce heavier and are longer lived.

Grape Vines

Our Stark City vines transplant without loss of vitality, and make such a large growth the first

Special Varieties

We Will Propagate Trees to Order for

Many fruit-growers have a new seedling fruit or an improved strain of a standard variety and wish to have some more trees just like them. We are specialists and can grow these trees better and can grow them for less money than you can. We have a large stock of trees for sale at all times.

Our business is propagating trees for particular fruit-growers. We supply the commercial orchardists who want trees by the carload and who know from experience that it is economy to plant the best, and we also supply the exacting man who has only room for a few trees and wants the very best

particular growers who often have us propagate special trees

Grown to Order

Special Varieties Grown to Order

We Will Propagate Trees to Order from Scions or Buds Furnished by You

Many fruit-growers have a new seedling fruit or an improved strain of a standard variety and wish to have some more trees just like them. We are specialists and can grow these trees better and can grow them for less money than you can. We have just the right kind of soil, the equipment and the "know-how."

Our business is propagating trees for particular fruit-growers. We supply the commercial orchardists who want trees by the carload and who know from experience that it is economy to plant the best, and we also supply the exacting man who has only room for a few trees and wants the very best so he can make the most of what ground he has. It is these particular growers who often have us propagate special trees

them. We do this at a reasonable cost. On larger quantities, you furnishing the scions, we will grow trees for you at the same price we charge for the regular trees of that class in our catalog; that is, if you want apple trees, we will grow them in quantities for the same price that we charge for the tree in our catalog. Smaller quantities take more time in proportion to their number, and the price is enough higher to pay for this additional work.

We will give you detailed directions for cutting and packing the scions or buds of apples, peaches, pears, cherries, or whatever you may want grown. It is very simple. Write for full particulars, mentioning the varieties and quantities you wish us to grow.

William P. Stark Nurseries Our address is easy to remember. The town is named after **Stark City, Mo.**

No. 8A—10 Peach Trees

Largest Size—White, Yellow, Cling and Freestone

This Collection will give you ripe peaches for three months. It is approximately 100 days from the ripening of Mayflower, the earliest Peach, to Mammoth Heath, the latest; in between are the best, tested, dependable varieties.

These Are Our Largest XXX 5 to 6-foot Size Trees \$2

No. 9A—8 Pear Trees

Largest Size—Two-Year—Fall and Winter

The Pear thrives on many soils. It is one of the most luscious, delicately flavored and juicy of fruits. Not hard enough are grown. This Collection will give you pears over a long season. Wrapped in paper, the fruit can be kept in an ordinary cellar for a long time.

3 Anjou: Late fall; very hardy; long-lived tree. Fruit yellow; fine-grained, but-terish, rich, high flavor.

1 Comice: Late fall; keeps a long time after ripening; large fine yellow. Tree regular bearer, adaptable to all Pear regions.

3 Kieffer: Winter; large, rich yellow; flesh good; splendid for canning; bears enormously.

1 Winter Nells: Winter; medium size yellow; sweet, aromatic, fine-grained flesh. One of the best.

A Special Pear Collection \$2

No. 12A 42 Small Fruits

Raspberries, Blackberries and Grapes

RASPBERRIES—10 St. Regis: The only successful overbearing red Raspberry. Brilliant crimson, large, juicy. Old canes bear until August, when comes of this season's good produce fruit. Hardy, vigorous.

10 Sunbeam: Mid-season; bright red; hardiest of all, regular bearer.

BLACKBERRIES—10 Wilson: Early, large, long berries; flesh juicy, good flavor; productive.

10 Mercereau: Mid-season; very large, oval berries, flesh sweet, melting.

GRAPES—1 Moore Early: Very large; deep, purplish black; ripens 2 weeks ahead of Concord.

1 Niagara: Mid-season; white, larger than Concord; vigorous, productive.

A Splendid Small Fruit Collection \$2

Our Special \$2 Home Garden Collections

Largest Sizes, Best Quality, at Money-Saving Prices.

We have put up these collections in "Units" form. The advantage is, you can pick out what you have room for without having to buy one big collection and getting a lot of things you don't need. You can make up your own combinations and get exactly what you need. If your space is small, order one collection; if you have plenty of room, order two or more of the same kind and save money, or you can take your choice. These collections are made up of our very largest, highest quality stock—the strongest and best trees and plants we grow. And that means the best you can get anywhere—and at especially attractive, money-saving prices. Bought singly, you could not get these trees and plants at anywhere near these prices. You make a considerable saving by ordering one or more of these collections now. At these low prices we can not make any changes in varieties. Please do not ask us to make changes.

Special Offer! All Six of These \$2 Collections for \$10

You Still Have Several Weeks Planting Time if You Set William P. Stark Trees

Nothing could prevent you from planting this spring and getting a whole year's start with your orchard. There is plenty of time, and we guarantee satisfaction with our splendid, dormant trees from our low-temperature packing-houses. Plant them now and get fruit just twelve months earlier.

You can either write or telegraph us (night message rates), and we will fill your order and rush it to the train the same day we get it. We have the best equipped brick packing-houses in the United States for handling rush orders. You will be delighted with William P. Stark trees—with the big, heavy roots—with their well-balanced tops—and with the way they push forth and grow. Senator Dunlap, one of the largest fruit-growers in Illinois, with over 1800 acres in apple orchards, writes us: "Your apple trees best that we have had from any nursery. Exceedingly well pleased with the quality of the stock." Don't wait. Write or wire us to-day sure. Safe arrival guaranteed.

No. 11A 20 Grape Vines

The Best Black, Blue, Red and White Grapes—For All Seasons

This Collection will give you the very best early, medium and late Grapes, and of the most popular kinds and colors. Grapes grow on very poor, rocky soil. Every place should have some.

- 5 Moore Early: Very early; dark purplish black.
5 Niagara: Mid-season; white.
2 Concord: Mid-season; black.
2 Agawam: Very late; purple-red.
2 Diamond: Mid-season; yellowish white.
2 Warden: Early Grapes; black.
1 Lindley: Mid-season; dark red.

These Are the Largest Size
One-Year Vines \$2

14 Ornamentals \$2

Dorothy Perkins Rose—Beautiful Climber, Hardy, Vigorous

Our Demonstration J. H. Hale Orchard Offer

To Commercial Peach Growers

Trees Furnished for Test Orchards—Pay Us Out of the Crops You Get.

We want a demonstration J. H. Hale orchard in every peach-growing section of the country.

We want more people to know what a money-maker this great Peach is—to share in the profits it offers.

The foremost Peach-growers are already planting it by the thousands. They realize that the J. H. Hale has so many advantages that it is folly to plant any more Elberta. These men have won success by always being first with the big profit-producers, by getting their orchards started ahead of the crowd. Mr. Hale did it in the late eighties when he planted the first Elberta Peach orchard in the North and cleaned up a fortune by it. And now in the J. H. Hale he has a Peach as far ahead of the Elberta to-day as the Elberta was to other Peaches in its day. Men and concerns like Roland Morrill, of Michigan, who has set out 3,000 J. H. Hale trees; Bert Johnson, of Arkansas,

with 10,000; the Redlands Heights Ranch Co., of California, with 14,000; the Chert Mountain Orchard Co., of West Virginia, with 4,500; F. S. Soper & Son, of Delaware; J. A. Wilson, of New York; Hopkins & Son, Michigan; Senator Dunlap, of Illinois; and scores of other big planters know it and are planting it.

We have a special proposition to make to commercial Peach-growers who are figuring on an orchard of 500 or more trees.

We will arrange to furnish you trees and let them pay their own way. This is the most liberal offer you have ever had. There is still plenty of time to get in the orchard this spring. Write us at once for full particulars about our DEMONSTRATION ORCHARD PLAN.

Don't wait. Seize this opportunity to-day. Write us now.
